

~~SECRET~~D-R-A-F-T
1 May 1963

RECOMMENDATIONS

1. Retain the Geographic Intelligence Report (GR) as described in CIA Regulation HR 51-4, 1 April 1961. The GR's are little used at present, but the category should remain. Revise the definition now in use by St/P/HR to remove the "major."
2. Eliminate the Geographic Intelligence Report - Limited (GR-L) as a category.
3. Replace the GR-L with a Geographic Support Study (GS) and use the definition formerly applied to either the GR-L or the Geographic Support Project (GP) as stated by St/P/HR, with some revision. Use the Geographic Support Study as the outlet for substantial reports such as E and E studies, paramilitary studies, etc. Use GS as the designation.
4. Limit the use of the Geographic Support Project (GP) to the Collation Project and to map support provided by D/GG.
5. Create a new category, Geographic Support Brief (GB), as an outlet for the shorter, quickie-type products such as GP 62-1 (evaluation of a cable), GP 62-227 (the Gauss-Kruger grid), boundary inventory work for State, contributions to NIE, working papers, etc.

GROUP 1
Excluded from automatic
declassification

~~SECRET~~

6. Retain the Geographic Intelligence Memorandum (GIM) as is. Revise the definition now in use by St/P/RR to conform with the CIA Regulation.

7. Retain the Geographic Research Aid (A.GRA) as is. Supply a definition for St/P/RR. [It was inadvertently omitted from the most recent St/P list.]

8. Retain the Weekly Acquisitions List of Maps for Foreign Areas (W.MA) as is; revise definition.

9. Retain the Monthly Acquisitions List of Maps for Foreign Areas (M.MA) as is; revise definition.

10. Initiate a new series called Map Notice (N.M), a one-sheet, eye-catching product to be used for announcing new maps of particular significance.

11. Abandon the practice of adding an "L" for limited distribution unless there is some reason for its retention that is not now apparent. "limited" has been used so widely as a control that its meaning as "limited distribution" is obscured. Use ad hoc instead of "limited" in referring to distribution that is nonstandard.
